

Balani Infotech Pvt Ltd is excited to announce its collaboration with M/s imagetwin Ai GmbH, Vienna for a new plagiarism detection tool, specifically and exclusively developed for detecting plagiarism in Images and figures.

What is imagetwin:

imagetwin is an AI based software for detecting integrity issues in figures of scientific papers:

- It is an exclusively plagiarism detection tool for checking the academic integrity of images in science articles.
- It detects inappropriate manipulation and duplication in many figure types, including blots,, microscopy images, and light photography
- It finds out if a figure was reused across articles by checking against its database containing over 50 Million images.
- It finds duplicates and data fabrication within articles.
- It finds integrity issues in seconds and with high accuracy

imagetwin increases quality and trust in science and helps to maintain academic integrity in research works.

Useful for Botany, Plant Biology, Molecular Biology, Genetics and Medical Science, Life Science researchers
